

Exercise 4a

1. Construct the strike lines of the bedding plane whose outcrop trace is shown in the map. Determine the dip direction and the dip angle and enter your results as *Clar* value and geological value.
2. At point P, another layer surface is outcropping, which has the same dip direction and dip angle as the layer surface as in 1. Construct the outcrop trace (*Ausbisslinie*) of the layer.

Exercise 4b

- 1. Construct the geological profile AB. Determine the structure value and the true thicknesses.*
- 2. Construct the geological profile CD and determine the apparent dip and the apparent thicknesses of the layers.*
