

Exercise 8

1. Determine the orientation of the fault (structural value, dip direction / dip).
2. Determine the orientation of the layers (structural value, dip direction / dip).
3. What vertical movement has taken place on the fault?
4. Complete the fault signature on the map.
5. Construct the geological profile A-B.
6. Reconstruct the sequence of geological events.
7. Draw a column profile (Säulenprofil).
